Fellowship Plan

Anand Bhattad, PhD Student, Computer Science, UIUC

My fellowship plan outlines the research skills and experiences I plan to gain during the fellowship and how these will advance my career objectives in the field of computer vision.

Objective 1: Develop Exceptional Research Proposal Writing Skills. During the fellowship, I aim to develop exceptional research proposal writing skills to advance in the competitive field of computer vision. By studying successful proposals and gaining a deep understanding of their components, I will craft compelling and effective proposals that secure funding from leading agencies. I will achieve this by attending grant writing workshops, reviewing successful proposals, and working closely with my mentors to refine my proposal writing skills.

Timeline: By the first year, I aim to submit at least one proposal to a leading funding agency.

Objective 2: Enhance Technical Presentation Skills to Engage and Inform Audiences. During the fellowship, I aim to enhance my technical presentation skills by attending workshops, presenting at top-tier conferences and seminars, and participating in training sessions. My objective is to deliver clear and engaging presentations that convey complex ideas with clarity and leave a lasting impact on audiences. To achieve this objective, I will practice presenting research in front of colleagues and peers, seek feedback, and attend workshops on effective presentation techniques.

Timeline: By the end of the fellowship, I aim to deliver at least three engaging technical presentations at leading conferences and seminars.

Objective 3: Strengthen Leadership, Management, and Mentorship Skills. During the fellowship, I will recruit and manage a team of talented students to work on innovative research projects, ensuring high standards and a productive work environment. To achieve this, I will attend workshops on leadership, management, and mentorship, seek advice from mentors and experienced researchers, and work closely with my team to assign tasks, provide feedback, and push research boundaries. I will also identify teaching and mentoring opportunities, assist in courses, mentor students, and seek feedback from experienced educators.

Timeline: By the end of the fellowship, I aim to have completed two peer-reviewed research projects co-supervised with mentors and mentored at least four students in research projects.

Objective 4: Foster Collaborations to Advance Research. I will actively seek out collaboration opportunities during the fellowship. I will attend conferences and seminars, participate in online forums and discussion groups, and reach out to researchers whose work aligns with mine. By presenting my research, participating in discussions, and initiating collaborations, I aim to push the boundaries of my research and contribute to impactful research.

Timeline: By the end of the fellowship, I aim to have established at least two new collaborations.

Objective 6: Organize Workshops to Share Knowledge and Build Community. Working with my mentors, I will identify topics of interest, invite top-tier researchers to participate, and create a platform for sharing ideas and building a network by organizing workshops. I aim to organize engaging workshops that attract participants from leading academic institutions to foster collaborations, share innovative ideas, and build a strong research community.

Timeline: By the end of the fellowship, I aim to have organized at least one impactful workshop that attracts participants from leading academic institutions.

In sum, my goal is to develop exceptional research proposal writing skills, enhance technical presentation skills, strengthen leadership and management abilities, gain valuable teaching and mentoring experience, foster collaborations with other experts in the field, and organize workshops to share knowledge and build a community. With the guidance of my mentors and the support of the research community, I am confident that I will be able to achieve these objectives and make significant contributions to the field of computer vision and machine learning.
